APMA 1655 Honors Statistical Inference I February 26, 2023

Homework 2

Name: Tanish Makadia *Due: 11 pm, February 17*

Collaborators: N/A

- You are strongly encouraged to work in groups, but solutions must be written independently.

Please feel free to use all the results in the Appendix of HW 2 without proving them.

1 Problem Set

1. (2 points) Suppose $(\Omega, \mathbb{P})$ is a probability space, and B is a event with $\mathbb{P}(B) > 0$. We define a function $\tilde{\mathbb{P}}$ of subsets of Ω by the following

$$\tilde{\mathbb{P}}(A) \stackrel{\text{def}}{=} \mathbb{P}(A \mid B), \quad \text{for all } A \subset \Omega.$$

Please prove that $\tilde{\mathbb{P}}$ is a probability, i.e., $(\Omega, \tilde{\mathbb{P}})$ is a probability space as well.

Proof. We will prove that $(\Omega, \tilde{\mathbb{P}})$ is a probability space by proving the following three axioms:

- $\underline{\tilde{\mathbb{P}}(A \subset \Omega) \geq 0}$: $\tilde{\mathbb{P}}(A) = \mathbb{P}(A \mid B) \geq 0$
- $\underline{\tilde{\mathbb{P}}(\Omega) = 1}$: $\tilde{\mathbb{P}}(\Omega) = \mathbb{P}(\Omega \mid B) = \frac{\mathbb{P}(\Omega \cap B)}{\mathbb{P}(B)} = \frac{\mathbb{P}(B)}{\mathbb{P}(B)} = 1$
- <u>Countable Additivity</u>: Let $A_1, \dots, A_m \subset \Omega$ be mutually disjoint events.

$$\begin{aligned}
\tilde{\mathbb{P}}(A_1 \cup \cdots \cup A_m) &= \mathbb{P}((A_1 \cup \cdots \cup A_m) \mid B) \\
&= \frac{\mathbb{P}((A_1 \cup \cdots \cup A_m) \cap B)}{\mathbb{P}(B)} \\
&= \frac{\mathbb{P}((A_1 \cap B) \cup \cdots \cup (A_m \cap B))}{\mathbb{P}(B)} \\
&= \frac{\mathbb{P}(A_1 \cap B) + \cdots + \mathbb{P}(A_m \cap B)}{\mathbb{P}(B)} \\
&= \tilde{\mathbb{P}}(A_1) + \cdots + \tilde{\mathbb{P}}(A_m)
\end{aligned}$$

$\square$

2. (1 point) Let $(\Omega, \mathbb{P})$ be a probability space and n be a positive integer. $B_1, B_2, \dots, B_n$ are events and provide a partition of Ω, i.e.,

- $\bigcup_{i=1}^{n} B_i = \Omega$,
- $B_1, B_2, \dots, B_n$ are mutually disjoint.

Let A be any event. **Please prove that $A \cap B_1, A \cap B_2, A \cap B_3, \dots, A \cap B_n$ are mutually disjoint**, i.e.,

$$(A \cap B_i) \cap (A \cap B_j) = \emptyset, \quad \text{if } i \neq j.$$

Proof. Let $B_i, B_j \in \{B_k\}_{k=1}^n$ such that $i \neq j$. We have that $B_i \cap B_j = \emptyset$. It follows that $A \cap B_i \subset B_i$ and $A \cap B_j \subset B_j$. Thus, it must be the case that $(A \cap B_i) \cap (A \cap B_j) = \emptyset$. □

3. (2 points) A box contains w white balls and b black balls. A ball is chosen at random.

   - If the chosen ball is white, we add d white balls to the box, that is, now there are $w + d$ white balls and b black balls.
   - If the chosen ball is black, we add d black balls to the box, that is, now there are w white balls and $b + d$ black balls.

   After adding the d balls, another ball is drawn at random from the box. **Show that the probability that the second chosen ball is white does not depend on d.** Hint: Use the law of total probability (LTP).

   Proof. Let W, B denote "white" and "black" respectively.

   We have that $\Omega = \{(W, W), (W, B), (B, W), (B, B)\}$. Let $A = \{(W, W), (B, W)\}$ represent the event that the second ball picked is white. We will now create a partition of Ω using the following elements:

   $$B_1 = \{(W, W)\} \qquad B_2 = \{(W, B)\} \qquad B_3 = \{(B, W)\} \qquad B_4 = \{(B, B)\}$$

   Since $B_1, \dots, B_4$ are mutually disjoint and $B_1 \cup \dots \cup B_4 = \Omega$, we have that $\{B_i\}_{i=1}^4$ forms a partition of Ω.

   By the law of total probability,

   $$\begin{aligned}
   \mathbb{P}(A) &= \sum_{i=1}^{4} \mathbb{P}(A \mid B_i) \cdot \mathbb{P}(B_i) \\
   &= \sum_{i=1}^{4} \mathbb{P}(A \cap B_i) \\
   &= \mathbb{P}(W, W) + \mathbb{P}(B, B) + \mathbb{P}(\emptyset) + \mathbb{P}(\emptyset) \\
   &= \frac{w}{w+b} \cdot \frac{w+d}{w+b+d} + \frac{b}{w+b} \cdot \frac{w}{w+b+d} \\
   &= \frac{w^2 + dw + bw}{(w+b)(w+b+d)} \\
   &= \frac{w(w+b+d)}{(w+b)(w+b+d)} \\
   &= \frac{w}{w+b}
   \end{aligned}$$

   Therefore, we have proven that $\mathbb{P}(A)$ does not depend on d. □

4. (1 point) Suppose the underlying probability space is $(\Omega, \mathbb{P})$. Let G and H be events such that $0 < \mathbb{P}(\mathsf{G}) < 1$ and $0 < \mathbb{P}(\mathsf{H}) < 1$. **Give a formula for $\mathbb{P}(\mathsf{G}|\mathsf{H}^c)$ in terms of $\mathbb{P}(\mathsf{G})$, $\mathbb{P}(\mathsf{H})$ and $\mathbb{P}(\mathsf{G} \cap \mathsf{H})$ only.**

5. (1 point) Suppose we have the following

$$\begin{aligned}
&\mathbb{P}(\text{“snow today”}) = 30\%, \\
&\mathbb{P}(\text{“snow tomorrow”}) = 60\%, \\
&\mathbb{P}(\text{“snow today and tomorrow”}) = 25\%.
\end{aligned}$$

   Given that it snows today, what is the probability that it will snow tomorrow?

6. (3 points) Let $(\Omega, \mathbb{P})$ be a probability space. Suppose we have two events A and B such that $\mathbb{P}(\mathsf{A}) > 0$ and $\mathbb{P}(\mathsf{B}) > 0$. **Please prove that the following three equations are equivalent.**

   (a) $\mathbb{P}(\mathsf{A} \,|\, \mathsf{B}) = \mathbb{P}(\mathsf{A})$,

   (b) $\mathbb{P}(\mathsf{A} \cap \mathsf{B}) = \mathbb{P}(\mathsf{A}) \cdot \mathbb{P}(\mathsf{B})$,

   (c) $\mathbb{P}(\mathsf{B} \,|\, \mathsf{A}) = \mathbb{P}(\mathsf{B})$.

2 Appendix

Please feel free to use all the results in the appendix without proving them.

2.1 Appendix 1

Let A, B, and C be events. Then, we have

- (Commutative Law) $A \cup B = B \cup A$,
- (Commutative Law) $A \cap B = B \cap A$,
- (Associative Law) $(A \cup B) \cup B = A \cup (B \cup C)$,
- (Associative Law) $(A \cap B) \cap C = A \cap (B \cap C)$,
- (Distributive law) $(A \cup B) \cap C = (A \cap C) \cup (B \cap C)$,
- (Distributive law) $(A \cap B) \cup C = (A \cup C) \cap (B \cup C)$,
- $(A \cup B)^c = A^c \cap B^c$,
- $(A \cap B)^c = A^c \cup B^c$.

2.2 Appendix 2

Let $A_1, A_2, \ldots$ be any sequence of events and B be an event. We have the following

$$\left(\bigcup_{n=1}^{\infty} A_n\right)^c = \bigcap_{n=1}^{\infty} A_n^c,$$
$$\left(\bigcap_{n=1}^{\infty} A_n\right)^c = \bigcup_{n=1}^{\infty} A_n^c,$$
$$B \cap \left(\bigcup_{n=1}^{\infty} A_n\right) = \bigcup_{n=1}^{\infty} (B \cap A_n),$$
$$B \cup \left(\bigcap_{n=1}^{\infty} A_n\right) = \bigcap_{n=1}^{\infty} (B \cup A_n).$$
